DUSTBIN FOR MULTIDUST™ BANKS

DISCONTINUATION OF DB-90

We used to supply our MDB filter systems with a drum of 90 litres. Unfortunately, our supplier has ceased the production of these drums and there is no compatible alternative available in the market.

NEW DUSTBIN DB-80

For this reason, we now¹ supply another type of dustbin with a volume of 80 litres. As a consequence, we needed to modify the connection with the hopper and the design of the trolley as well.

In the table below you'll find an overview of the discontinued products and the new sales items that replace the old ones.

For the actual prices of the new products, we refer to the price lists on the extranet;

- PRL_Fume_extraction_filtration | page 42
- PRL_Spart_parts | page 92

You can identify the differences between the old and the new dustbins as follows:

	DB-90 (old)	DB-80 (new)
Shape	cylindrical	slightly conical
Upper diameter	approx. 495 mm	approx. 475 mm

With kind regards,

Michel Ligthart
