#### Alloy type

Low carbon pure nickel weld metal with titanium de-oxidation.

#### Materials to be welded

ASTM-ASME	BS	DIN
UNS N02200	NA11	2.4066
UNS N02201	NA12	2.4068 2.4061

#### Proprietary alloys

Nickel 200 and 201 (Special Metals)  
Nickel 99.6 and 99.2 (VDM)

#### Applications

These consumables give low carbon pure nickel with the addition of titanium for refinement and de-oxidation. They are used for joining pure nickel to itself, for buffer layers, and for cladding joint faces and flanges. The solid wire is also useful for welding **cast iron** to give soft low strength deposit.

Applications include **tanks** and **vessels**, **process pipework** and **heat exchangers**, in **chemical plant** for **salt production**, **chlorination** and **evaporation of caustic soda**. Also used for handling **corrosive alkalis** and **halides**.

#### Microstructure

In the as-welded condition the microstructure consists of almost pure nickel austenite. It is strongly ferromagnetic at room temperature.

#### Welding guidelines

Pure nickel weld metals are sluggish and can lead to irregular weld beads which may require inter-run dressing.

#### Products available

## NIMROD 200Ti

All-positional pure nickel MMA electrode

<b>Product description</b>	MMA electrode with special carbonate-fluoride-rutile flux system on matching core wire. Smaller diameters offer excellent all-positional operability. Recovery is about 100% with respect to core wire, 65% with respect to whole electrode.

## NIMROD 200Ti (continued)

<b>Operating parameters</b>	DC +ve					
	ø mm	2.5	3.2	4.0		
	min A	60	70	90		
	max A	80	110	145		
<b>Packaging data</b>	ø mm	2.5	3.2	4.0		
	length mm	300	350	350		
	kg/carton	12.3	13.5	15.0		
	pieces/carton	720	414	300		
<b>Storage</b>	<b>3 hermetically sealed ring-pull metal tins</b> per carton, with unlimited shelf life. Direct use from tin is satisfactory for longer than a working shift of 8h. Excessive exposure of electrodes to humid conditions will cause some moisture pick-up and increase the risk of porosity. For electrodes that have been exposed: <b>Redry</b> 200 – 250°C/1-2h to restore to as-packed condition. Maximum 350° C, 3 cycles, 10h total. <b>Storage</b> of redried electrodes at 50 – 200°C in holding oven or heated quiver: no limit, but maximum 6 weeks recommended. Recommended ambient storage conditions for opened tins (using plastic lid): < 60% RH, > 18°C.
